Title: The BirthCast Media as a Socio-cast.

1 Project

It provides a digital media[2,3,4,5,6] concerning social media and affective media. The context of media described here can include media of television in broadcasting. Social media is based on concept of next generation child from 1-12 years who are involved in media of selfie.[1]

2 Description

The birth of a child from the womb of the mother will be near to all other offsprings in their generation. The next generation will not be far from help from other children. The mothers of the born child will cast the babyface even right from the womb and other children (already born) will see the face of each daytime or night season.

3 Motivation

The holy gift from the womb of mothers is same and proud of their parents. For the sake of pride and prosperity, the birth of baby will be counted. You are my baby or child and I cast you to the next generation. Lucky child has their cry heard by the next generation. A new baby is born. A social media based birth cast will give the next generation babies a kind enthrone.

4 Impact

The praises of a baby or child will be broadcast from daytime to night season. The birth cast of Child's or baby's first womb will be seen by all next generation babies or children. A child's womb will show show being it pink, yellow or green to their equal offsprings.

5 Execution

The wise offspring will video with their trusted parent camera or phone (mobile) to their page. The next child will have the chance to shoot their daily activities as video or sound or picture to the social media.

6. Conclusion

This is the proper birth cast[2,3,4,5,6] and the generation will never fall short of what to do in each day. It does matter where the next generation child is. The baby cob will be created as a result because it will culture their life and deliver them from pressure ages. This is the proper birth cast and the generation will never fall short of what to do in each day. Children always pick character from others but this time there will be a pool of videos, sounds or pictures to help the child develop an inner-character as the next generation broadcast.
